About

About DevSpot

Scan

QR Codes

Books

Study as you wish

Events

Check in into Events

Logout

Using the Application

To access and reach out **Dashboard**. There are few steps to get through there. The steps can be found below :

- Register Account
- Login (Use credentials entered registration in process)

Alternative way to login into the application :

- Use the **Google Sign in Button** available

Great. Its easy

DevSpot

"DevSpot" a Developers community is especially designed for the programmers and developers helping to provide news, learning, solving problems and stay connected with developers and programmers. By using a community site for learning, solving the problems and connecting with other great developers and programmers will make everyone passionate about their work.

Simple Application

If you select About from Dashboard. It open the top left about us page. It includes brief introduction of the application

Select Scan. It open camera to scan any QrCodes

Note: User permission is required and must allow for camera use

Books

If you want to find books online which might help you for your reference or study new ideas, take your skills to whole new level, etc.

- Select Book
- Find books by title, scroll down if necessary
- Select the desired book
- Now ready to read

The most important characteristic of Java is that it was designed from the outset to be machine independent. You can run Java programs unchanged on any machine and operating system combination that supports Java. Of course, there is still the slim possibility of the odd glitch, as you are ultimately dependent on the implementation of Java on any particular machine, but Java programs are intrinsically more portable than programs written in other languages. An

application written in Java only requires a single set of source code statements, regardless of the number of different computer platforms on which it is run. In any other programming language, the application frequently requires the source code to be tailored to accommodate different computer environments, particularly if an extensive graphical user interface is involved. Java offers substantial savings in time and resources in developing, supporting, and maintaining major applications on several different hardware platforms and operating systems.

Possibly the next most important characteristic of Java is that it is object-oriented. The object-oriented approach to programming is an implicit feature of all Java programs, so you find out what this means later in this chapter. Object-oriented programs are easier to understand and

Events

This is interesting part and feature of this application. It shows various events running and up coming events. Want to take part ? It's easy

- Select Events from Dashboard
- Find the desired event
- Read the details / Location
- Interested ?
- Select Get Ticket
- Enter your Name and Save
- Take Ticket with you in the Event
